The Iguiting Point of Petroleum.

Grude, purpoisum generally gives of at common temperatures, quite though vapor to form an explosive mixture with the after it to be in a conflued space, as in a partially empty temp, bottle or cask. For this, among other reasons, ortice petroleum is always reflued before it is add to the general public, it is destiled up to the general public, it is destiled the petroleum and, under the name of petroleum spirit to use as a substitute for tunpenhue. The next and larger portion which distills is the refund petroleum, so extensively sold under various manues as a cheap littuminating of the residue is heavy oil used for lubicating purposes. As perroleum is not a definite chemical compound, but a varying mixture of several dydrocarbons, is as about, it in an econatant chemical property of which advantige might be taken in devising a ready method of taking igniting points, at follows that the nethod selected mass be more of less and than the nethod selected mass be more of less and the nethod selected mass be more of less and the simple in principle, easy of execution, occupying little time in performance, and inexpensive, and when this is found, to that steps for accomplishing a far more difficult task—namely, securing its universal adoption. Now the ignition method acts at the repetition of its application in an open dish, sancer, basin or bowl. Even if this experiment could be ulways similarly per formed under constant conditions, which is impossible, the rightly with which vapor escapes from the surface of the liquid renders a thermountire red ingetition of the temperature at which individual deviation of the temperature at which is distinguished to the first and an important of the distinguishment of the periodic search of the liquid renders of partially closed vases. Again, the petroleum must not be heated in a formoun bottle, on account of the great lability of the later to fracture, nor is it necessary to our must test laborator as a few partial and the common test tube of our interest of the liquid, constant

During the close of the debate in the House of the Commons on Disraell's Reform amendments, Mr. Gladeston said the Government bill was shallow, transparent and dissimulating pretence of a measure for the extension of the franchise, and he despaired of it ever being made good or benealed by the amendment in the House.

The Times' Richmond special says. It seems impossible to ascerish positively whether Davis will be tried or not. Judge Underwood says if he is not it will be because the attences are not ready to proceed; that the Court is ready and that Chase will preside. It is asserted that the Government these not desire his trial, but wishes Davis released from military custedly, and the responsibility of his detention thrown on the Judiclary. It released, he will be arrested on a benefit warrant under the Norfolk indictment. Then the Government counsels, professing not to be rerily for trial, will not resist the motion, and will admit bell.

The College is said to be more demoralizing in its influence than the army : not-Orthodox at the alleged immorality of our army All our criminal statistics go to show, that more vice catered, than was discharged from it, while it is a fact patent to all, that hundreds of young men who came here innocent and undefilled a The offorts which are made by all good citizens

The offerts which are made by all good clizens to keep excitement and temptation out of the reach of students, are not without effect, and we feel free to say that Ann Arbor possesses many advantages over either Harvard or Yale in this respect. Those who so considently predict that respect. Those who so considently predict that descipation will ultimately ruin the University, may find some consolution in this, although it does not bessen the will in their own midst.—Some chain that there is a revolution going on among the students themselves that will soon make immornity in any form, a lant to admission into any of the College conclude, and this, if true, is indeed satisfing at the root of the cell. So mode it he. The very absence then, of all those auxiliaries to city life, on which young men as a class depend for their positive, i.e., and although we mast admit that Ann Arbor is the duline place for an idler this side of the city, and although we mast admit that Ann Arbor is the duline place

We cannot second their views as applied to the publisher, but must scknowledge their depth as applied to the community at large, for in this as in every other enterprise, the primary quarton is, How will it influence the Univertity? and the answer s evil. There are however three weeklies whice erve to give an air of American civilization to serve to give an air of American civilization to these classic shades, bad are popularly supposed to be as effections as Mrs. Winslow's soothing syrup, in quieting the nervous system. We have no choice between them, but after careful smits-sis, have come to the conclusion that all our local editors indulge in frequent doses of purgoice before withing their cultoriats, "delicious languor" is the prevailing spice.

Let me close this letter by one more evidence that lorating and sense are at a discount here, probably the effect of an overstocked market. A few days since we paid a visit to the new cometery. It is really a beautiful spot, and shows evidence that much care and labor is bestowed month it for proter farsion, to give it an include. appearance. We spent some time in examining appearance. We spent some time in examining appearance. We spent some time in examining the beautiful monuments and spientid white the sculpture are men of laste. As we wandered have to the main entrance by another route than the one by which we left it on entering, we examine the properties of the content than the one by which we left it on entering, we noticed a heautiful slab of marble a short distance off, which we deemed worthy of examination, and accordingly delayed our departure for a moment to look at it. The design and inscription were chaste and bandful; the stone itself very fine in texture and finish, and we were about promauncing it a model of its kind when our eye it on the following epitaph:

"Here lies entomind to return to dust The affections of our hear s,
The darious called, we must submit
She wished for to depart.

The champions of women's rights propose to make a "big fight" on that line, so they consider it a long enride towards female authrage. At present it looks amazingly as if the feminine gender "estricted the most gune."
